

Amlogic Openlinux Access Request Procedure

Openlinux is public server Amlogic uses to make source code accessible for authorized Amlogic partners.
ONLY READ-ONLY ACCESS TO THE SERVER WILL BE PERMITTED.

The following procedure should be followed to grant 3rd party partner code access privilege.

Grants a new access

- 1) Sales receives public key from Amlogic partner.
 - Amlogic partner types the below commands in Linux shell to generate public key:
`$ ssh-keygen -t rsa`
`$ cd ~/.ssh`
`$ cat id_rsa.pub`
 - The id_rsa.pub is the generated public key and needs to be submitted to Amlogic Sales.
 - **AMLOGIC ONLY SUPPORTS LINUX DEVELOPMENT PLATFORM.**
- 2) Amlogic Sales will forward the request to internal team for approval.
- 3) After the request is approved, Amlogic IT will grant the access right to Amlogic partner; meanwhile Amlogic IT will inform Sales, then Sales will forward the information to Amlogic partners.
